

JOB POSTING

Full Stack Web Developer w/Front End Emphasis

THE DEETS

Creative Core, LLC is a creative agency offering graphic design, web design and development, business consulting and other services. We are based in Los Angeles and have worked with 100+ diverse clients locally and worldwide.

We are seeking a multidisciplinary Full Stack Web Developer to join a growing and experienced team of designers and developers.

The position will likely involve aspects of the whole stack. However, the ideal candidate will be well versed in front-end development and will be able to build a beautiful user interface efficiently and know how to implement fast, elegant code. We value self-motivated individuals who work well in a collaborative environment, constantly generating and sharing new ideas with the team.

RESPONSIBILITIES

- Develop and maintain front end web sites and applications
- Develop and maintain complex backend systems
- Build scalable cloud based web/backend applications
- Have a general understanding of good UI practices and work closely with UX and design to refine and improve user experience
- Leverage open source technologies
- Make data driven decisions to improve stability and performance
- Implement tests at all levels of the stack

SKILLS

“WHAT WE'RE LOOKING FOR” SKILLS

- Significant experience with dynamic languages. This should include Javascript and at least one of Python, Ruby, PHP or Perl.
- Experience of using server side web frameworks (e.g. Rails, Django, Microsoft MVC)
- Solid understanding of Javascript, preferably with a working knowledge of jQuery.
- You don't need to be a designer, but we look for people with a good working knowledge of HTML and CSS.
- Good general knowledge of Internet architecture and protocols.
- Solid background in Linux/Unix development and administration.
- Ability to write technical documentation (specifications, proposals, documentation)
- Desire to take responsibility to deliver good quality software in a timely manner.
- Some database and data-modelling knowledge (SQL, NoSQL, Schema Design)

“NOW YOU’RE JUST SHOWING OFF” SKILLS

- C/C++ programming skills
- Experience with CRM integration (Rasier’s Edge, Salesforce, etc.)
- Experience of building and using automatic test frameworks.
- Experience of using AngularJS.
- Basic knowledge of SQL and writing database backed systems used in a production environment with moderate amounts of data.
- Experience of developing server-side Internet server software.
- Track record of using & developing REST-based APIs
- Exposure and/or interest in mobile application development both in terms of native applications and responsive design
- Knowledge of other technologies including liquid, video-streaming, etc.
- Wider experience in using a range of related programming technologies (PHP, Ruby, Rails, C#, .NET, Go)
- Experience in virtualization and cloud-computing.
- Familiarity with Agile development methodologies.

COMPENSATION

WHAT’S IN IT FOR YOU?

- Space to work in our Downtown Los Angeles office w/ a team dedicated to creating great work!
- Flexible schedule (we are more than ok with working within your availability including some autonomous hrs off-site)
- Complete project management (you will work with our management and creative teams to liase with our clients)
- Negotiable/Salary rates (based on experience)

SOUND LIKE A GOOD FIT?
